

InAmigos Foundation

Website Improvement Analysis

Prepared by: Ikshit Sinha | Web Development Task 2 | inamigosfoundation.org.in

Date: August 10, 2026

1. Task & Objective

Task: Analyze the foundation's website and suggest improvements across design, content, layout, and user experience.

Objective: To develop an understanding of website analysis and improve user-experience thinking.

Note on method: The live site could not be captured as browser screenshots in this environment, so this audit was built by directly reading the rendered HTML/content of every page (Home, About Us, Contact, Causes) — the same information a screenshot would show. Every finding below is tied to a specific, real page so it can be checked directly against the live site and marked up in Figma/annotations for the final submission.

2. Critical Issue — Found First

⚠ Spam / SEO link injection on every page

Every page checked (Home, About Us, Contact) begins with a bare list of unrelated outbound links — e.g. "slot gacor", "situs slot gacor", "slot thailand" — pointing to gambling-related third-party domains, appearing before the real navigation and content even load.

Why it matters: this is a classic sign of a compromised CMS/theme or a hacked plugin injecting spam backlinks. It damages the NGO's credibility with donors, actively hurts Google search rankings (search engines penalize sites linking to spam/gambling content), and is a security red flag — the same injection point could later be used for phishing or malware.

Recommendation: Treat this as priority #1, ahead of any visual redesign. Scan the CMS (theme files, plugins, database) for injected content, change all admin passwords, update the CMS/plugins to the latest version, and re-audit with Google Search Console's Security Issues report before doing anything else on this list.

3. Homepage — inamigosfoundation.org.in

3.1 Design

Category	What we found	Suggested improvement
Hero section	The five flagship projects (BachpanSala, Udaan, Jeev, Sewa, Prakriti) are shown only as stacked one-line taglines with no imagery, icons, or color differentiation between them.	Give each project its own icon/photo, a short 1-line description, and a distinct accent color so a first-time visitor immediately grasps what the six projects (note: page text lists 6, but only 5 appear here — see 3.2) actually do.
Stats section	"200 Volunteers / 28 States / 6 Causes / 50000 Beneficiaries" are shown as plain numbers with small labels — easy to miss while scrolling.	Turn these into a visually prominent stat strip with large bold numbers, icons, and (optionally) count-up animation — this is the foundation's strongest credibility signal and deserves more visual weight.
Social links in header	Twitter, Google, and Pinterest icons in the header/footer link to the generic homepages (twitter.com, google.com, pinterest.com) instead of the foundation's actual profiles.	Point every social icon to the foundation's real, active profile (the foundation is active on Instagram, X/Twitter, LinkedIn, and YouTube per its social

Category	What we found	Suggested improvement
		presence) or remove the icon if no profile exists for that platform.

3.2 Content

Category	What we found	Suggested improvement
Project count mismatch	The intro paragraph says "We run six major flagship projects," and lists a 6th one — Project Vikas (skill development/employability) — in the text, but the visual project cards above only show 5 (Vikas is missing from the visual section).	Add a 6th card for Project Vikas so the visual section matches the written claim, or correct the copy to say five if Vikas is being folded into another project.
Generic placeholder-style copy	Section names are strong ("Serving Humanity with Compassion") but the body copy under "Get to Know Us Better" is a dense single paragraph repeating certifications (80G, 12A, CSR-1, NITI Aayog, ISO) before ever saying what the foundation actually does day-to-day.	Lead with 2-3 sentences of impact/story (e.g., "Since 2020 we've served 50,000+ meals..."), then move certifications into a compact badge row — donors scan for impact first, credentials second.
Volunteer bios	Volunteer email addresses are published in plain text/mailto links on a public page (e.g. personal Gmail addresses).	Publish only first name + role + city, and route contact through a general foundation inbox or a contact form to protect volunteers from spam/scraping.

3.3 Layout & Navigation

Category	What we found	Suggested improvement
Primary nav	Nav order is Home, Causes, About Us, Volunteers, Gallery, Blog, Events, Contact — "Donate" is not in the main nav at all; it only appears as a button lower down.	For an NGO, Donate should be a persistent, high-contrast button in the header on every page, not something the visitor has to scroll to find.
Gallery section	Homepage gallery shows only 4 raw, unlabeled image thumbnails with no captions or link context.	Add captions (event name/date) and a clear "View Full Gallery" link/button under the grid.
CTAs	Three separate CTAs (Donate Us, Become a Volunteer, Join Us) sit close together with similar button styling, competing for attention.	Establish a clear visual hierarchy — one primary CTA (Donate) in a bold filled button, and secondary actions (Volunteer/Join) as outlined/lighter buttons.

3.4 User Experience

Category	What we found	Suggested improvement
Donation link	"Donate Us" points to an external Razorpay payment link (rzp.io) rather than a branded donation page on the foundation's own domain.	Wrap the payment link in a branded on-site "/donate" page that explains where funds go and shows the 80G tax-benefit note, with the Razorpay link embedded — this builds more donor trust than jumping straight to a generic payment link.
Volunteer sign-up	"Become a Volunteer" opens an external Google Form with no context on the button itself about what happens after submitting.	Add a short line near the button ("Takes 2 minutes — we'll email you within a week") to reduce drop-off from uncertainty.

4. About Us Page

Category	What we found	Suggested improvement
Content depth	The page is thorough on certifications and project stats but has no founder photo, team photos, or a short founder message/quote — it reads as a credentials sheet rather than a story.	Add a founder photo + 2-3 line quote, and short team photos where possible; NGOs raise more trust through visible people than through certification lists alone.
Readability	Long unbroken paragraphs with heavy bold-text emphasis (nearly every sentence has 3-4 bolded phrases), which is visually noisy and reduces actual emphasis value.	Bold only the 1-2 most important terms per paragraph; move the credential list (80G, 12A, CSR-1, NITI Aayog, ISO 9001:2015) into a simple icon/badge row instead of inline bold text.
Missing visuals	No photos of the six projects in action (Seva, Bachpanshala, Jeev, Udaan, Prakriti, Vikas) — only text bullet points with impact numbers.	Pair each project bullet with a small photo or icon; visual proof of impact (a meal being served, a sapling being planted) converts better than numbers alone.

5. Contact Page

Category	What we found	Suggested improvement
Form validation/labels	Form fields ("Full Name," "Email," "Your Message") appear as placeholder-only labels with no visible field labels above them and no indication of required fields.	Add persistent labels above each field (not just placeholder text, which disappears on typing) and mark required fields — this is also an accessibility best practice.
No map or hours	Address is given as text only (Ward No. 5, Sipat Ujwal Nagar, Bilaspur) with no embedded map, and no listed office hours despite a "24x7 365 Days" claim seen elsewhere on other foundation pages.	Embed a Google Map for the office address, and state hours/typical response time so visitors know when to expect a reply.
Single phone/email only	Only one phone number and one email are listed with no separation between general queries, volunteering, media, or partnership requests.	For a 28-state operation, add a short "Who to contact for what" section (Volunteering / Donations / Media / CSR partnerships) so messages reach the right person faster.

6. Sitewide / Technical

Category	What we found	Suggested improvement
Mobile responsiveness	Stat blocks and multi-column sections (volunteers, events) are wide grid layouts that likely stack awkwardly on small screens — worth manually checking on an actual phone.	Test every template (home, about, causes, events, volunteer profile) at 375px width and fix any overflow, especially the stats row and image grids.
Consistent branding	Footer logo, header logo, and social icon set are all repeated identically in header and footer, adding visual redundancy without adding new information.	Keep branding in the header only; use the footer space instead for a newsletter signup or a short mission tagline, which is more useful to a first-time visitor scrolling to the bottom.
Page load / spam risk	Related to the Section 2 finding — the injected spam links likely come from an outdated CMS/plugin, which can also slow page load and hurt SEO ranking beyond the spam content itself.	After cleanup, run the site through Google PageSpeed Insights and Search Console to confirm both performance and index health are restored.

7. Prioritized Action List

#	Action	Priority
1	Remove injected spam/SEO links; secure CMS, update plugins, rotate admin credentials	Urgent
2	Add Project Vikas card to homepage / align project count with copy	High
3	Move Donate into a persistent header button + branded on-site donate page	High
4	Remove personal volunteer emails from public pages; route via general inbox	High
5	Add founder/team photos and project-in-action photos to About Us	Medium
6	Fix contact form labels + add map and response-time note	Medium
7	Point social icons to real foundation profiles	Medium
8	Enlarge/redesign the stats strip (volunteers, states, causes, beneficiaries)	Low
9	Test and fix mobile layout across all templates	Low
